## Certificate

about the glove

**Powder free nitrile examination glove, blue**  
**Powder free nitrile examination glove, black**  
**Powder free nitrile examination glove, white**  
**all non-sterile and all products with a low dermatitis potential**

### Clinical application study under dermatological control

The test products were applied over a period of four weeks by 24 subjects 30 minutes per day on the hands. From the clinical-dermatological point of view no relevant skin reactions occurred in the test area. The products were tolerated

**excellently.**

Neither intolerance reactions suggestive of irritation nor allergic reactions (contact dermatitis) were detected. Accordingly, from the dermatological viewpoint, there is no high potential for irritation for the tested products when this is used as intended.

**Dr. med. Gerrit Schlippe**  
Specialist in Dermatology and  
Venereology
